

Fitzy – Conversational AI Shopping Assistant

Executive Overview

Fitzy is an interactive, voice-driven conversational AI assistant designed for clothing and apparel e-commerce platforms. The application acts as a personal shopping guide, taking users seamlessly from item discovery through preference refinement, cart updates, and final checkout.

Key Capabilities & Features

- **Style & Preference Qualification:** The assistant engages users in natural dialog to identify specific clothing needs, aesthetic preferences (e.g., formal yet modern), and color choices.
- **Interactive Item Selection:** Users can select individual items directly during the conversation and request immediate placement into their shopping cart.
- **Dynamic Sizing & Cart Management:** The system collects required sizing details (e.g., Size Large) before confirming item additions to the cart.
- **Streamlined Conversational Checkout:** Prompts users whether they wish to continue browsing or finalize their order immediately.
- **Automated Order Confirmation & Logistics:** Instantly processes successful orders and provides accurate delivery estimations.

User Interaction Workflow

The demonstration highlights a complete, end-to-end shopping interaction:

1. **Inquiry & Needs Assessment:** The user initiates a request for assistance in finding a suit.
2. **Preference Gathering:** The assistant clarifies suit styles (formal yet modern) and preferred colors (black or dark blue).

3. **Product Selection:** The customer identifies a preferred suit and instructs the assistant to add it to the cart.
4. **Sizing & Cart Update:** The assistant queries for the required size, receives "Large", and updates the cart accordingly.
5. **Checkout Transition:** The assistant checks if further shopping is required; the user opts to check out.
6. **Fulfillment & Confirmation:** Order placement is confirmed with an estimated delivery timeline of 2 to 3 days.
